COVID: Eating orders up 40% at start of pandemic -study

First half of 2020 saw 230,458 new cases says Cineca

(ANSA) - ROME, MAR 15 - Eating disorders rose sharply during the early stages of the COVID-19 pandemic, according to the results of a survey by the Cineca consortium of Italian universities and public institutions. The survey, which ran until February 2021 and was based on data from various IT sources analysed by the consortium, said there were 230,458 new cases of eating disorders in the first half of 2020, a rise of 40% on the 163,547 new cases registered in the first half of 2019.
